FARFISA

INTERCOMS SINCE 1967

7" screen

the 7" monitor with the lowest consumption on the market

essential design

hand-free

Farfisa is proud to introduce its new range of indoor stations, Sette.

The range includes highly streamlined products consisting of a few elements only, but capable of fulfilling the most stringent market requirements. The new monitor is named '**Sette**' and '**Italian View**' is its payoff, because it shows the broadest possible view and guarantees the utmost security, even thanks to the **7"** screen.

Conceived in co-operation with the designer *Alessandro Andreucci*, Sette is essential in such a rigorous, striking design in its extremely thin thickness that appears even more evident thanks to the innovative cutting edge at 45° which makes it appear almost suspended from the wall. Summary of the gritty character of today's Farfisa company.

It mounts a 7" TFT LCD with 16:9 format, for ultimate viewing of the scene captured by the video camera. The product reveals an extensive and advanced level of development, as the monitor exploits the digital 2-wire Duo System technology. LED-lit icons, soft-touch buttons and controls on the graphic interface allow for managing advanced video door entry.

Sette is compatible with all Farfisa external door panels using the Duo System and can be integrated with different indoor stations. Moreover, it is suitable for IP and telephony applications.

As an example of the company's green soul, Sette is the 7" monitor with the lowest energy consumption available on the market.

→ SE4252

Dim: mm 194x156x25

Color hand-free videointercom with 7" LCD screen.

Soft touch control for door opening and conversation, 4 buttons for intercommunication, auto-switch on and additional functions. Signalling LED'S for door open and bell exclusion. Possible further expansions through OSD menu.

→ KIT

SE4252ABW

One-way colour videokit with **Alba** CV2124AB door panel with 1 call button + SE4252 **Sette** monitor + 2221MQ power supply.
